

## Inspiron 3000 Laptops

Feature-packed laptops with built-in DVD and the latest processors

### Computing Essentials

The 3000 Series laptops offer a rich set of standard features and options. These combine to make a laptop that's easy to use and built for the long haul. The latest processors from Intel® and AMD handle today's software easily and provide zippy, responsive performance whether you're surfing the web, writing a term paper, editing videos or doing web chats. Available HD resolution (1366x768) touch display adds attractive design to the screen - looks upscale, is easy to clean and makes it easy to manipulate objects on-screen thanks to 10-finger capacitive touch for seamless zooming, scrolling and tapping. Available built-in DVD drive plays DVDs/movies, rips music from CDs, burns videos and music onto readable/writeable DVDs, and is a convenient means of loading software, applications and data onto the laptop.
